RENEWING CAST STONE

While nicks, stains, cuts and scratches can permanently mark most of other stone surfaces,they will not compromise to the appearance of Cast Stone's solid surfaces, that is because it is easy to restore Cast Stone to its original state ,by using an ordinary abrasive cleanser and common household degreaser. And if damage does occur, Cast stone can be repaired on site, saving both downtime and aggravation.

Like other high-use product, damages are inevitable with Cast Stone, But because Cast Stone is solid all the way through, it is easy to retrieve to its original appearance following the method as described below.

Identify the extent of damages and ascertain whether a simple repair will solve the problem. If the damage is minor, try to repair it with an ordinary abrasive cleanser or a common household degreaser

If the above method is unsuccessful, follow the simple polishing steps below.

1/Clean the surface with clear water, ensure no dust is remaining.

2/Use #600 sandpaper to polish the surface in concentration with clear water.

3/Use #1000 sandpaper to polish the surface in concentration with clear water until gaining a smooth surface.

4/Wipe out water with dry and clean cloth.

5/Polish with 3M wax.
